

IN THE SPECIFICATION

Please amend the paragraph spanning line 26 of Page 1 to line 5 of Page 2 of the Specification as follows:

The earliest computer viruses infected boot sectors and files. Over time, computer viruses became increasingly sophisticated and diversified into various genre, including cavity, cluster, companion, direct action, encrypting, multipartite, mutating, polymorphic, overwriting, self-garbling, and stealth viruses, such as described in “Virus Information Library,”[[<http://vil.mcafee.com/default.asp?>]], Networks Associates Technology, Inc., (2001), the disclosure of which is incorporated by reference. Macro viruses are presently the most popular form of virus. These viruses are written as scripts in macro programming languages, which are often included with email as innocuous-looking attachments.
